

# SAFETY DURING CONSTRUCTION

*Utah State  
Correctional Facility*

**Layton | OKLAND**  
A JOINT VENTURE

# WELCOME TO THE SITE

---

- Welcome to the site of the new Utah State Correctional Facility
- This new 4,000-bed facility will be built with state-of-the-art materials and workmanship
- Design will use the new direct supervision model, helping inmates build better social relationships and work towards normalization before integrating into society

# DURING CONSTRUCTION

---

- More than 30 buildings
- Up to 1,200 construction professionals working on the site at the same time
- Primary focus is to get these workers home safely each night. Each person will be responsible for their Personal Safety Zone (30' circle)
- The following Safety Requirements will help us all accomplish that goal

# SAFETY CHECK-IN AND ORIENTATION

---

- All workers and visitors to the site are required to check in at our trailer
- Everyone **MUST** go through our Safety Orientation
- Once completed, the workmen will be issued a sticker for their hardhat that will indicate that they have been trained
- Those who will visit only periodically will have their name on a listing that will be checked as they come to the trailer prior to entering the work site

# PERSONAL PROTECTIVE EQUIPMENT

---

- Personal Protective Equipment, or “PPE,” is required for all who come onto the site
- PPE for visitors includes a hardhat, a safety vest, safety glasses and over-the-ankle shoes. Visitors will be provided this equipment by the Layton Okland Team.

# PERSONAL PROTECTIVE EQUIPMENT

---

- Subcontractors and others who will be working on site will be required to provide their own PPE that meets standards set by OSHA and Layton Okland
- All PPE equipment will be inspected and certified regularly

# HOUSEKEEPING

---

- A clean work environment is a safe work environment and one that also leads to the best quality and productivity
- Each trade is responsible for keeping their storage and work areas organized and clean on a daily basis
- If a subcontractor fails to meet the housekeeping standards established by Layton Okland, the cleaning will be done by others, the costs for which will be deducted from the subcontract amount owing

# POWER CORDS

---

- Layton Okland requires that all power cords be sized properly for their use
- Cord inspections are required monthly, and a different colored tape is used each month to indicate that the cord has been inspected
- We embrace a “Nothing Hits the Floor” program for cords whereby hangers are installed to keep the floors free of tripping hazards and reducing cord damage

# LADDERS LAST

---

- OSHA reports and studies indicate that one of the frequent contributors to recordable accidents and fatalities are ladders
- On this project, we are adopting a “Ladders Last” policy. If at all possible, we wish to discourage the use of ladders and replace their use with approved scaffolding.
- Layton Okland will provide access to multiple levels using approved stair scaffolding. If access to an area is not able to be accomplished by approved scaffold, we recommend a platform ladder be used. Ladder use is addressed in greater detail in our Site Specific Safety Plan.

# SMOKING POLICY

---

- The Utah State Correctional Facility construction site is a Smoking Free zone
- This includes electronic devices
- There will be a designated smoking area off the site
- Chewing tobacco is prohibited on the site as well

# OTHER RESTRICTIONS

---

- No alcohol
- No guns
- No music radios or earbuds
- For more details we refer you to our Site Specific Safety Plan

# CARPOOLING

---

- Due to the remote location of the site, the volume of workers, and restricted access and parking, we strongly encourage carpooling

# INCIDENT MANAGEMENT

---

- Procedures following an incident are outlined in our Site Specific Safety Plan and will be posted in several locations on the site. Our on-site Safety Managers will take the lead role in managing any incidents that may arise. It will be important for you to follow their instructions.
- Call 911 as needed
- Provide First Aid to the level of your training
- Notify member(s) of LOJV Safety Team
- Follow the instructions given by the LOJV Safety Management Team

# CONCLUSION

---

- We want to ensure that every individual who works on this project is focused on safe practices and is proactive in seeing that they and those working around them are able to go home each day without injury.
- Let's all work together to make it happen!
