

Synthesis of Predation Management Best Management Practices (BMP's)

This appropriation would fund an assessment and synthesis of the best management practices in 20 western states. This information would provide policymakers with recommendations that could be implemented to better manage predation impacts of livestock, wildlife and human health and safety.

Agency: Utah State University

Public Purpose: Better management of state resources to manage the impacts of predation on livestock, wildlife and human health and safety resulting in increased economic stability.

Requested Amount: \$200,000, one-time in FY 2019
