

## Keep wet wipes out of the pipes!

The wet wipe market is estimated to be a \$2.1 billion industry as of 2018. The estimated cost of the wet wipe industry to the sewer infrastructure just in the state of Utah is \$3 million per year. Wet wipes are one of the leading causes of sewer backups in residential homes. Wet wipes do not break down and even the ones that rip apart end up weaving back together in the sewer lines creating fatbergs when they combine with fats oils and grease or possibly damaging mechanical pumps or other equipment. Sewer industries across the nations are advocating the disposal of wet wipes in a trash can. Citizens are encouraged to do they're part, Pee poo paper and that is it!
