<b>Environmental Quality</b>	UTG-200714010-aa	Preparation of WIPP Shipments	Western Governors Association	\$179,442	\$0	\$0	7/1/2020 - 6/30/2021	0%	N	0	Submitted	1	New
Description and Purpose of Grant:	Due to Utah's location, an enormous amount of hazardous materials shipments must pass through the state. Most of these routes travel through rural, sparsely populated regions. Emergency services in many areas are provided by all volunteer organizations. Radioactive material shipments through these areas create risks which must be managed with limited resources. Funds to provide training and equipment required to deal with these accidents is often impossible to obtain. This grant will prepare our public safety personnel to respond to potential transportation incidents related to DOE shipments. Utah will also work to inform citizens and public officials regarding these transuranic wastes.

Health	UNF-200731010-ab	Testing a Systems and Cross-Sector Alignment Mechanism for Action on COVID-19 in Utah	Robert Wood Johnson Foundation	\$200,000	\$0	\$0	11/1/2020 - 10/31/2022	5%	N	0	Submitted	2	New
	Description and Purpose of Grant:	<p>This grant will provide supplemental research funding to teams that are already engaged in the study of a promising system alignment mechanism, with the objective of learning how this mechanism performs in addressing health and social needs during the COVID-19 pandemic. Eligible teams must have an active or recently completed research study (within 12 months of application submission) that can be extended through the use of supplemental research funding. This CFP is appropriate for studying an existing system alignment mechanism implemented prior to the arrival of the COVID-19 pandemic, and about which some pre-COVID evidence has already been created by the applicant.</p> <p>Studies funded through the S4A program must test a specific system alignment mechanism that engages all three of the sectors referenced in this call—medical care, public health, and social services. [From OHCS] In reaction to the aforementioned call, the Office of Health Care Statistics would like to study an existing system alignment mechanism facilitated by the office: the Utah Health Data Committee and its subcommittees, which consists of payers/insurers, public health professionals and physician board members. Specifically, the overarching goal is to capitalize on one of the current assessments our office conducts, called the Clinic Quality Comparison Report, to include how COVID-19 has impacted screening and preventive measures, such as anti-depression medication adherence, breast cancer and chlamydia screening, well-child visits, etc. These reports are essentially analyses produced with the intention of increasing transparency among clinics, which depicts how well clinics perform on key quality metrics. Clinics across the state of Utah are the main audience of these analyses, and it is created with the goal of fostering change and engaging clinics in understanding the degree to which they operate, given best practices in medicine and healthcare delivery. At the individual/consumer level, these reports provide helpful information which facilitate selection of a clinic which maintain high quality standards. The most recent quality metrics used in the Clinic Quality Comparison Report include: • Comprehensive Diabetes Care: Hemoglobin A1c (HbA1c) Testing • Colorectal Cancer Screening • Comprehensive Diabetes Care: Medical Attention for Nephropathy • Antidepressant Medication Management: Effective Acute Phase • Chlamydia Screening in Women (Total) • Breast Cancer Screening • Antidepressant Medication Management: Effective Continuation • Well-Child Visits in the Third, Fourth, Fifth and Sixth Years of Life • Asthma Medication Ratio (Total) • Well-Child Visits in the First 15 Months of Life: 6plus Visits • Percentage of members 18 years and older who met the PDC threshold of 80% for Statins during the measurement period. • Avoidance of Antibiotic Treatment in Adults with Acute Bronchitis The report, which uses data from the Utah All Payer Claims Database, is disseminated to various stakeholders, including the individual clinics, the Transparency Advisory Group of the Utah Health Data Committee, and is made available on OpenData, for public use. The motivation behind our intention to pursue this funding is multitudinous. First, we would like to explore the impact COVID-19 on the aforementioned quality measures, and if there are any notable regional or healthcare systems-based disparities in quality during the pandemic.</p> <p>Additionally, there are some key measures which are preventive (breast cancer screening, colorectal screening, well-child visits) which may be hampered as a result of aggregate population-based reactions to the COVID-19 pandemic, which may inadvertently perpetuate other adverse health outcomes. Next, consistent with the expectations set forth in the call for proposals, we perceive the Utah Health Data Committee, the Transparency Advisory Group, Payers Advisory Subcommittee and Facilities Subcommittee, facilitated by the Office of Health</p>
