COVID-19 has disrupted nearly every aspect of life as we know it, from education to the economy, work and worship, families and friends. As individuals, families and communities, we share the hope that we will soon have effective treatments for, and ultimately prevention of, this disease so the people who matter most to us can resume their lives and thrive.

In this unprecedented time, we are reminded of the significance of a research university in a healthy, vibrant society. At the University of Utah, at least 100 research groups are currently studying causes and consequences of COVID-19. Virtually every entity at the U. is involved, including undergraduate students and staff who are assisting in and supporting research projects while working remotely.
