

FACTS ABOUT SB 88 AND mDLs

1. Did you know Utah constituents overwhelmingly rejected Apple, Google etc?

It is safe to assume from this data that unknown technology solutions will **not be trusted** and therefore **not adopted by the public** (Nov 2019, Digital Wallets report)

<https://demosite.utah.gov/citizen-portal/wp-content/uploads/sites/48/2019/11/Digital-Wallet-3.pdf>

2. Did you know facial recognition data and fingerprints data go out to private parties like Google, Apple, Amazon Web Service, Get Group, and Scytales?

<https://www.phonescoop.com/articles/article.php?a=22479>

3. Did you know the international ISO standard has been designed for vaccine passports, vehicle registrations, and ALL digital ID?

“As ISO/IEC 18013-5 is being adopted globally as the basis for mobile driving licences, we are also seeing the same standard being used for digital vaccination certifications in line with the specifications provided by the World Health Organization,” said Phil Wennblom who chairs JTC 1 (ISO and IEC)

Working on it, the committee realized that this was a digital credential and it would be a shame to develop the technical protocols for one purpose only, when there are many more digital credentials. The committee was asked to look into the possibility of using this standard beyond driving licences, for vehicle registration certificates, and specifically for vaccination certificates.

4. Did you know that mDL is being interfaced with TSA at the Federal Level?

<https://gcn.com/cybersecurity/2021/04/tsa-exploring-mobile-drivers-licenses-for-real-id-identity-verification/315348/>

5. Did you know that the world's largest biometric ID deployment (Aadhar – India) has led to a humanitarian disaster?

Thousands of ration cards have been canceled without notice or clear modes of redress. Over one million children were denied admission in school. Women found it harder to access their maternity benefits and workers of state-run programs were denied their wages. A recent study showed that 1.5 to 2 million people lost access to their benefits at some point due to Aadhaar. The result was multiple starvation deaths, as people were in effect cleansed off welfare lists.

Do you know that the mDL is neither secure, private, trustworthy, “convenient”, nor something minor, but a break in the dam that will erode all privacy?
