

# HB 92

## TRANSPORTATION OF DOGS ACT

**84%**

of dog owners traveling with their dogs are not restraining them.

**25 MPH** → **40X FORCE**

If a car crashes at a speed of just 25mph, an unrestrained dog can be projected forward at a force equal to 40 times its weight. A large-size dog weighing 75 lbs., for example, can achieve an impact force of 3,000 pounds in a car crash, which could be a lethal blow for both a passenger and pet.

Even for smaller pets traveling at just 30 miles per hour, an unrestrained 10-lbs dog will exert 300 pounds of pressure in an accident.

**100,000**

dogs are killed each year while riding in pickup truck beds.
