

# UTAH DEPARTMENT OF CORRECTIONS

## MANAGING CAPACITY

UDC is using a system-wide, multidisciplinary approach to increasing public safety by improving treatment in prison and in the community, an aggressive approach to eliminating drugs entering the prisons, and improving overall reentry services and leadership changes.

### Immediate Action Plan

**Goal:** Create a capacity management plan that results in a net reduction of 20 individuals (or more) from both returns and releases each week, resulting in an annual capacity buffer of 1,560.

**1. Capacity Management Team:** Multidisciplinary team of staff working directly with inmates and parolees to develop a plan for simultaneously reducing the number of people returning to prison on Parole Violations and increasing the number of people releasing to parole.

**2. Warrant and Prison Return Review:** AP&P will require Region Chief Review of all BOPP warrants and prison returns. Ensure those who pose a significant threat to public safety are prioritized for return to prison and others are monitored safely in the community through other interventions and enhanced case management.

**3. Active Reentry Planning:** Reentry and Rehabilitation Case Managers will employ an active case management approach to ensure releases are maximized based on a 12-month forward projection and planning system.
