Statement from Pro-Life Utah in Support of HB315 – Human Growth and Development Instruction

WHAT THE BILL DOES

- Strengthens Utah's existing requirements for instruction on human growth & development.
- Requires schools to show scientifically accurate videos of fetal development, including fertilization, organ development, and stages of growth before birth.

WHY IT MATTERS

- Many students receive health instruction with little or no visual context for prenatal development. Providing medically accurate materials helps students better understand how human life forms and grows.
- Clear, science-based instruction supports healthy decision-making, personal responsibility, and respect for human life..

Our children deserve an education grounded in science. We urge you to vote in favor of HB315.
