

**RESOLUTION URGING FEDERAL  
GOVERNMENT REVIEW OF ALTERNATIVES  
FOR ATLAS MILL TAILINGS**

2002 GENERAL SESSION

STATE OF UTAH

**Sponsor: Mike Dmitrich**

**This joint resolution of the Legislature urges the federal government to evaluate all legitimate relocation alternatives for the Atlas Minerals Corporation Moab uranium mill tailings.**

*Be it resolved by the Legislature of the state of Utah:*

WHEREAS, between 1956 and 1984, at the direction of the Federal Atomic Energy Commission, the Atlas Minerals Corporation and its predecessors deposited approximately 10.5 million tons of uranium mill tailings into an unlined pile adjacent to and in the floodplain of the Colorado River approximately three miles northwest of Moab, Utah;

WHEREAS, the Atlas Minerals Corporation is now bankrupt, and the Federal Department of Energy has acquired title to the property and responsibility for its cleanup;

WHEREAS, federal law mandates remediation of this site in accordance with Title I of the Uranium Mill Tailings Radiation Control Act of 1978, but exempts Utah from the cooperative agreement participation requirement and its 10% cost-share obligation;

WHEREAS, the Department of Energy has prepared a draft preliminary plan for the remediation which has been submitted to the National Academy of Sciences for its review and comment before the Secretary of Energy selects a remediation alternative;

WHEREAS, presently, the major benefit for remediation-in-place is a cost savings, but there is a greater likelihood that costs could increase in the long term;

WHEREAS, because of the geologic complexity of the Moab site there are uncertainties associated with the long-term integrity of the remediation-in-place alternative;

WHEREAS, by relocating the pile and disposing of the tailings off-site, a stable disposal site can be selected to better ensure cell performance that minimizes potential long-term hazards and active maintenance requirements, and facilitates remediation of contaminated groundwater at

the Moab site;

WHEREAS, of the more than 20 Uranium Mill Tailings Radiation Control Act processing sites, no precedent exists for remediating a uranium mill tailings pile in a floodplain;

WHEREAS, tailings piles at seven other processing sites located in the Colorado River drainage basin upstream from the Moab site were relocated in areas outside the influence of the river; and

WHEREAS, the Governor, the Department of Environmental Quality, and many other federal and local officials and citizens of Moab have urged that the tailings be relocated:

NOW, THEREFORE, BE IT RESOLVED that the Legislature of the state of Utah urges the United States Federal Department of Energy, the National Academy of Sciences, and the Secretary of Energy to choose an option to relocate rather than to remediate the mill tailings adjacent to the floodplain of the Colorado River approximately three miles northwest of Moab, Utah.

BE IT FURTHER RESOLVED that a copy of this resolution be sent to the United States Department of Energy, the National Academy of Sciences, the Secretary of Energy, and the members of Utah's congressional delegation.
